

# Kanarazian Syllabary — UCSUR Proposal

=====

## 1. Introduction

-----

The Kanarazian Syllabary is a fictional writing system used in the constructed nation of Kanarazia, with its capital Kanarazu. The script is designed as a modern, rounded syllabary with influences from Japanese kana, Balinese, and Korean Hangul. This proposal requests the encoding of the Kanarazian Syllabary in the Under-ConScript Unicode Registry (UCSUR) in the Private Use Area block F3090–F30FF.

## 2. Background

-----

The Kanarazian language uses open syllables and simple consonant-vowel phonotactics. The script consists of 80 base syllabic characters, plus diacritics, punctuation, and formatting characters.

## 3. Proposed Block Allocation

-----

Block Name: Kanarazian Syllabary

Range: F3090–F30FF (112 codepoints)

## 4. Character Naming Convention

-----

Characters follow UCSUR conventions:

- U+F3090: KANARAZIAN LETTER A
- U+F3091: KANARAZIAN LETTER I
- U+F3092: KANARAZIAN LETTER U
- U+F3093: KANARAZIAN LETTER E
- U+F3094: KANARAZIAN LETTER O
- U+F3095–F30BF: consonant-vowel syllables

- U+F30C0–F30CF: combining marks
- U+F30D0–F30DF: punctuation
- U+F30E0–F30FF: reserved for future expansion

## 5. Script Structure

-----

The Kanarazian Syllabary is a purely phonetic writing system. Each character represents a CV syllable.

The script is written horizontally left-to-right. Combining marks modify tone or emphasis.

There is no letter case.

## 6. Comparison to Existing Scripts

-----

The script is structurally similar to:

- Japanese Hiragana (syllabic, rounded)
- Korean Hangul (systematic CV grid)
- Canadian Aboriginal Syllabics (block layout)

However, its shapes, ordering, and functional inventory are unique and do not duplicate any known script.

## 7. Encoding Justification

-----

Encoding in UCSUR will:

- allow stable interchange of Kanarazian text
- support conlang development
- allow chart listing at [kreativekorp.com/ucsur](http://kreativekorp.com/ucsur)
- enable font creation and digital archiving of the script

## 8. Representative Glyphs

-----

Glyph charts are provided separately and should follow UCSUR formatting:

- 12×12 grid per character
- monochrome vectors
- centered metrics

## 9. Acknowledgements
